

JENNY GIRAFFE

Giraffes are the tallest land animal in the world.

Just like the human fingerprint, no two giraffes have the same spots.

Giraffes can live between 20 and 30 years.

Male giraffes can grow to 18 feet in height, while females can grow up to 14 feet.

Giraffes are herbivores, their favourite food are leaves from the acacia tree.

A giraffe can clean its ears with its tongue, as a giraffe's tongues can be up to 45cm long.

Baby giraffes are 6 feet tall when born.

Giraffes usually live in African savannas, grassland or open woodland.

Giraffes sleep between 10 minutes and 2 hours a day.
